1 Sample Space and Events

Consider the sample space Ω of all outcomes from flipping a coin 3 times.

(a) List all the outcomes in Ω . How many are there?

(b) Let A be the event that the first flip is a heads. List all the outcomes in A. How many are there?

(c) Let B be the event that the third flip is a heads. List all the outcomes in B. How many are

(d) Let *C* be the event that the first and third flip are heads. List all outcomes in *C*. How many are there?

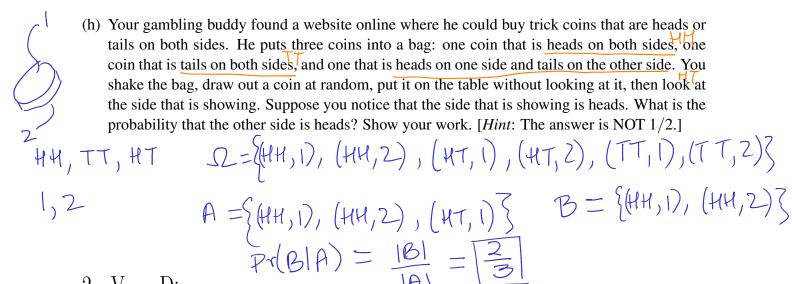

(e) Let *D* be the event that the first or the third flip is heads. List all outcomes in *D*. How many are there?

(f) Are the events A and B disjoint? Express C in terms of A and B. Express D in terms of A and B.

(g) Suppose now the coin is flipped $n \ge 3$ times instead of 3 flips. Compute $|\Omega|, |A|, |B|, |C|, |D|$.

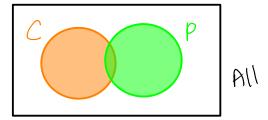

(g) Suppose now the coin is hipped
$$n \ge 3$$
 times instead of 3 hips. Compute $|\Omega|, |A|, |B|, |C|, |D|$.

$$|\Omega| = 2^{n}, |A| = 2^{n-1}, |B| = 2^{n-1}, |C| = 2^{n-2}, |D| = 2^{n-2}$$
CS 70, Summer 2020, DIS 4C fort
$$|A \cup B| = |A| + |B| - |A \cap B|$$
States instead of 3 hips. Compute $|\Omega|, |A|, |B|, |C|, |D|$.

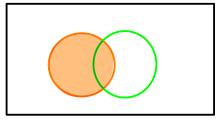

Out of 1000 computer science students, 400 belong to a club (and may work part time), 500 work part time (and may belong to a club), and 50 belong to a club and work part time.

(a) Suppose we choose a student uniformly at random. Let C be the event that the student belongs to a club and P the event that the student works part time. Draw a picture of the sample space Ω and the events C and P.

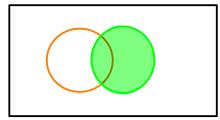

(b) What is the probability that the student belongs to a club?

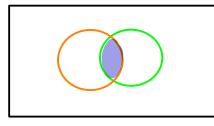

$$\frac{|C|}{|\Omega|} = \frac{400}{600} = 0.0$$

(c) What is the probability that the student works part time?

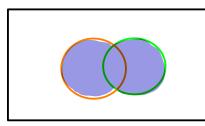

$$\Pr[P] = \frac{|P|}{|\mathcal{I}|} = \frac{1}{2}$$

(d) What is the probability that the student belongs to a club AND works part time?

$$Pr[PNC] = \frac{|PNC|}{|\Omega|} = 0.05$$

(e) What is the probability that the student belongs to a club OR works part time?

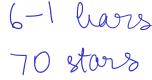

- 400 +500 - 50 1000

3 Counting & Probability

Consider the equation $x_1 + x_2 + x_3 + x_4 + x_5 + x_6 = 70$, where each x_i is a non-negative integer. We choose one of these solutions uniformly at random.

(a) What is the size of the sample space?

 $\chi \geq 0$

 $\begin{pmatrix} 70+5 \\ 5 \end{pmatrix}$

(b) What is the probability that both $x_1 \ge 30$ and $x_2 \ge 30$?

10 halls

6-1 lears

XI XZ X3 X4 X5 X6

(c) What it the probability that either $x_1 \ge 30$ or $x_2 \ge 30$?

$$= \left[\binom{40+5}{5} + \binom{40+5}{5} - \binom{15}{5} \right] / \binom{7}{5}$$
